SIMON FRASER UNIVERSITY S.S1.129

To	Members of Senate	From	Office of the	e Dean of Graduate Sa	tudies
Subject	Graduate Curriculum Changes - New Graduate Course Proposals, MRM 661-5, 662-5, 633-5	Date	September 15,	, 1981	

MOTION: That Senate approve and recommend approval to the Board, as set forth in S.S.-126 - New Graduate Course Proposals, MRM 661-5, 662-5 and 633-5.

These new graduate course proposals were approved by the Executive Committee, Senate Graduate Studies Committee, at their meeting on August 31, 1981.

Bryan P. Beirne Dean of Graduate Studies

DESCRIPTION:

Introduction to remote sensing and aerial photographic interpretation. The application of these techniques in the acquisition and display of selected resource data. Topics include air photo interpretation, multiband photography, thermal infrared imagery, satellite imagery, orthophotography, topographic and thematic mapping, and computer cartography.

APPENDIX A

Course Outline

The first half of the course covers remote sensing principles, instrumentation, and analysis. The second half deals with remote sensing applications in resource management and will involve student presentations. A seminar format will be used with lectures and discussions on outlined topics. Readings will be assigned in advance of the topics and applications will be oriented towards specific resource interests of the students. Six practical laboratory assignments are included to familiarize the students with important basic aspects of applied remote sensing.

TOPICS

1. Principles, Instrumentation and Analysis

- a. Introduction to Remote Sensing:
 - principles, concepts, and philosophical problems
 - scope and importance
 - electromagnetic spectrum and atmospheric effects
- b. Aerial Photographic Interpretation:
 - properties of panchromatic aerial photography
 - principles and procedures for interpretation
 - photo mosaics

LABORATORY 1: Introduction to aerial photography: - chracteristics of the stereo model; drainage interpretation.

- c. Visible Spectrum and Photographic Techniques:
 - image acquisition, flight planning and equipment
 - optical and electronic image analysis
- d. Nonphotographic Optical Sensors:
 - measurement and design considerations
 - radiometers, thermal scanners, and multispectral scanners

LABORATORY 2: Planning of aerial photography missions: - interpretational and logistical requirements.

- e. Passive and Active Microwave Systems:
 - theory and applications
 - imaging radars

side looking airborne radar synthetic aperature radar multi-channel radar

- f. Airborne Geophysical Systems:
 - aerial magnetometer surveys
 - inductive field electromagnetic surveys
 - gamma ray spectrometry
 - air sampling and miscellaneous techniques

LABORATORY 3: Interpretation of thermal imagery: - contaminant dispersion and water resource management.

g. Satellites and Sensors:

Landsat

Skylab

Seasat

Space Shuttle

Meteorlogical satellites

- h. Data Analysis and Ground Truth:
 - air photo interpretation and terrain analysis
 - computer processing pattern recognition spectral analysis quantative feature extraction
 - comparison of qualitative and quantitative techniques
 - ground truth for remote sensing

LABORATORY 4: Terrain analysis: air photo interpretation and highway route planning.

II. Remote Sensing Applications and Resource Management

- I. Remote Sensing in Agriculture and Forestry:
 - radiation and plant canopies
 - vegetation stress from disease, insects, and environment
 - crop identification
 - forest resource management

- j. Geological Applications:
 - photo-geology
 - radar imagery
 - multi-spectral techniques

LABORATORY 5: Basic photogrammetry: - height measurement and timber volume calculations.

- k. Hydrological Resource Management:
 - information requirements and hydrological parameters
 - contaminant dispersion
 - ground water, sediments and snow melt
- I. Oceanography and Remote Sensing
 - physical, biological, geological, chemical, and political considerations
 - maritime weather and navigation
 - hydrographic and coastal applications
 - sea ice
 - fisheries and political considerations

LABORATORY 6: Interpretation of colour photography: - water penetration film and vegetation stress.

m. Terrain Analysis and Cultural Applications:

- mapping

scale and resolution thematic mapping orthophotos computer cartography

- geographical research

photogrammetry temporal considerations urban applications rural applications developing countries
