Subject	NEW COURSE PROPOSALS - FACULTY OF ARTS - GEOGRAPHY 318-3 - SEDIMENT-
	OLOGY AND PAST ENVIRONMENTS;

From____SENATE COMMITTEE ON UNDERGRADUATE STUDIES

5 73-47

Date MARCH 15, 1973

ARCHAEOLOGY 438-3 - APPLICATION OF SEDIMENTOLOGY TO ARCHAEOLOGICAL SITES

> MOTION 1: "That Senate approve, as set forth in S.73-47, the new Faculty of Arts course proposals for Geography 318-3 - Sedimentology and Past Environments, and Archaeology 438-3 - Application of Sedimentology to Archaeological Sites."

> > If the above motion passes,

MOTION 2: "That Senate waive the normal two semester time lag requirement in order that Geography 318-3 may first be offered in the Fall semester 73-3."

MEMORANDUM

SENATE

From SENATE COMMITTEE ON UNDERGRADUATE STUDIES

5.73-47

Subject _____ NEW COURSE PROPOSALS - FACULTY OF ARTS - GEOGRAPHY 318-3 - SEDIMENT- Date FEBRUARY 28, 1973

OLOCY AND PAST ENVIRONMENTS; ARCHAEOLOGY 438-3 - APPLICATION OF SEDIMENTOLOGY TO ARCHAEOLOGICAL SITES

> On the recommendation of the Faculty of Arts, the Senate Committee on Undergraduate Studies has approved, as set forth in SCUS 73-5, the new course proposals for Geography 318-3 - Sedimentology and Past Environments, and Archaeology 438-3 - Application of Sedimentology to Archaeological Sites, and recommends approval to Senate.

6 NB - 9

It further recommends that the normal two semester time lag requirement be waived in order that Geography 318-3 may first be offered in the Fall semester, 73-3.

S'CUS 73-5

MEMORANDUM

As amended Feb.13, 1973 and updated Feb.20, 1973

Io	Mr. H. Evans, Secretary
	Senate Committee on
	Undergraduate Studies
	New Courses Geography 318-3
Subject	and Archaeology 438-3

From D.H. Sullivan, Dean

Faculty of Arts

Date January 15, 1973

The Faculty of Arts has approved the following courses: Geography 318-3, "Sedimentology and Past Environments" Archaeology 438-3, "Application of Sedimentology to Archaeological Sites"

Would you please ensure that these courses are put before SCUS as soon as possible.

D. H. Sullivan

FACULTY OF ARTS

NEW COURSE PROPOSAL

1. CALENDAR INFORMATION

Department: Geography Course Number: 318 Title: Sedimentology & Sub-title or Description: Past Environments An introduction to the interpretation of sedimentary bodies as geomorphic features. Special attention will be given to the development of sedimentology and pedology as tools in geomorphology and archaeology.

Credit Hours: 3 Vector Description: 2-0-3 Pre-requisite(s): Geography 211 or one of Arch. 101, 272 or 273, or permission of the Instructor.

2. ENROLMENT AND SCHEDULING

Estimated Enrolment: 60

Semester Offered (e.g. yearly, every Spring; twice yearly, Fall and Spring):

When will course first be offered? 1973-3

3. JUSTIFICATION

A. What is the detailed description of the course including differentiation from lower level courses, from similar courses in the same department, and from courses in other departments in the University?
This subject is introduced in lower level Geography courses but is not covered in depth. There are no identical courses in this or other departments. The course fills a gap in the physical geography program.

B. What is the range of topics that may be dealt with in the course?

Lectures, labs & field trips will deal with the description and interpretation of sediments and their soils as indicators of palaeoenvironments. C. How does this course fit the goals of the department?

The use of sediments and soils as tools of environmental reconstruction is a traditional field of physical geography. This course will strengthen the existing physical geography offerings in the Department.

D. How does this course affect degree requirements?

This course can be used to satisfy degree requirements and is recommended for geography majors specialising in geomorphology, and for archaeology majors.

E. What are the calendar changes necessary to reflect the addition of this course?

Addition to the calendar as a new course in the Dept. of Geography; listed as prerequisite for Archaeology 438-3 in Dept. of Archaeology; p. 37 of Calendar to read: "Physics 281-3, Physical Science in Archaeology, & Geography 381-3, Sedimentology & Past Environments, are specifically recommended for majors."

F. What course, if any, is being dropped from the calendar if this course is approved?

Geography 413 will be offered less frequently; i.e. from twice to once each year.

G. What is the nature of student demand for this course?

High. The Department of Archaeology has assured this Department that at least 30 of their students each year will require Geography 318; it is also likely that a similar number of students will be drawn from elsewhere.

H. Other reasons for introducing the course.

In addition to strengthening the existing programme in physical geography, Geography 318 represents, in part, a service course for Archaeology students. The Archaeology Department has requested the mounting of such a course by the Geography Department; the course is a prerequisite for a new Archaeology offering. Arch. 438.

. BUDGETARY AND SPACE FACTORS

A. Which faculty will be available to teach this course?

3.

Professor E.J. Hickin Professor M.C. Kellman Professor F.F. Cunningham

B. What are the special space 'and/or equipment requirements for this course?

Existing lab. facilities in Geography Department.

C. Any other budgetary implications of mounting this course: None apart from the normal operating costs associated with any course.

Course Outline

Sedimentology and Past Environments

Geography 318 is a laboratory-oriented course designed to General introduce students to the dynamics of the sedimentation process in a number of different environments. Attention will be given to problems of interpreting the character of sedimentary bodies (structure composition, and placement) in terms of depositional environments. Techniques of field and laboratory description of strata and horizonation will be developed together with their application to the general problems of interpreting archaelogical sites.

There will be no single text for the course. Students will be directed to a number of key journal articles in the areas of sedimentology and pedology.

Course Topics

Text

1. The dynamics of the sedimentation process in

- glacial and periglacial environments (a)**(b)**
- fluvial environments
- lacustrine and deltaic environments (c)
- (d) coastal environments .
- acolian environments (wind and gravity deposits) (e)
- volcanic environments (f)

2. Physical description of sediments

3. Chemical description of sediments

4. Description of sedimentary structures

5. Weathering and soil development in sediments

6. Interpretive sedimentology

NEW COURSE PROPOSAL

1. CALENDAR INFORMATION Archaeological Sites Department: Archaeology Sub-title or Description: Application of Sedimentology to Archaeological Sites Title: Application Archaeological Sites Title: Application of Sedimentology to Archaeological Sites Title: Application of Sedimentology to Archaeological Sites Sedimentology

The applications of techniques of sedimentology and pedology to the descriptive analysis of archaeological sites.

Credit Hours: 3 Vector Description: 0-0-3 Pre-requisite(s): Geography 318 and one lowerdivision archaeology course

2. ENROLMENT AND SCHEDULING

Estimated Enrolment: \$ 30

Semester Offered (e.g. yearly, every Spring; twice yearly, Fall and Spring):

once yearly

When will course first be offered?

1974-1

3. JUSTIFICATION

A. What is the detailed description of the course including differentiation from lower level courses, from similar courses in the same department, and from courses in other departments in the University? This subject is introduced in lower level courses but not dealt with in detail. There are no identical courses presently offered.

B. What is the range of topics that may be dealt with in the course? This course will cover the descriptive analysis of cultural deposits including their characteristics, classification, and temporal and paleo-climatic implications. Physical and chemical techniques introduced in Geography 318 will be applied to the critical analysis of a bedy of archaeological literature, and to the descriptive interpretation of the stratigraphy of local archaeological sites.

How does this course fit the goals of the department? C. The analysis of sedimentary and stratigraphic features of archaeological sites is an integral aspect of archaeological interpretation.

D. How does this course affect degree requirements?

This course can be used to satisfy degree requirements and is recommended for archaeology majors.

"E. What are the calendar changes necessary to reflect the addition of this course?

Addition to the calendar

F. What course, if any, is being dropped from the calendar if this course is approved?

:• :•

None

G. What is the nature of student demand for this course?

en e presta l'esta par que <u>se se se</u> se se and a High an technology and a second

H. Other reasons for introducing the course.

The combination of Geography 318 and Archaeology 438 will provide the students with a valuable introduction to the application and potentialites of interdisciplinary research.

The set of • • • •

BUDGETARY AND SPACE FACTORS

- A. Which faculty will be available to teach this course? K.R.Fladmark H.L.Aloxander
- B. What are the special space and/or equipment requirements for this course?

Cooperative utilization of the Geography Department geomorphology laboratory

C. Any other budgetary implications of mounting this course: None

Application of Sedimentology and Stratigraphy to Archaeological Sites:

Archaeology 438-3

Archaeology Section - Outline:

A. Descriptive Analysis of Cultural Deposits

- Cultural Depositional Environments differentiation from natural
- 2. Characteristics physical and chemical
- 3. Types of Deposits cultural soils; shell-middens; bone deposits; cave deposits, etc.
- 4. Cultural stratigraphy disturbance, excavations, reversals
- 5. Temporal Implications of Depth of Deposits, organic decay, etc.
- 6. Paleontological Remains as Paleo-environmental Indicators

B. Critical Review of the Archaeological Literature

This section will involve research papers and class seminars in which the techniques learned in previous sections of these two classes (Geography 318-3 and Archaeology 438-3) will be applied to a critical review of archaeological reports dealing with sedimentological analysis.

A partial reading list is appended.

C. Practical Situation

Application of techniques and approaches learned in previous sections to the descriptive analysis of the cultural and non-cultural constituents of a local archaeological site.

MEMORANDUM

Ian Mugridge, Chairman,
S.C.U.S.From Roy Carlson, Chairman,
Archaeology Department.SubjectYour memo February 15thDate February 20, 1973

In response to your memo of February 15th regarding Archaeology 438-3 "Applications of Sedimentology and-Stratigraphy to Archaeological Sites": this subject is introduced in the following lower level courses:

- Archaeology 272 -"Archaeology of the Old World", partly in discussing the sequence of cultural deposits at Olduvai Gorge.
- Archaeology 273 "Archaeology of the New World", partly in discussing the depositional sequences in the Arctic, in the Southwest, and on the northwest coast.

The subject is not covered in detail in any of these courses but is simply introduced. A great many subjects are introduced in lower level courses as this is the nature of lower level courses. This is not "overlap" but is part of the structure of knowledge and part of teaching method, that is, subjects introduced in lower level courses are covered in depth in upper level courses.

A sample course outline is attached as requested.
