PREREQUISITE: Students who have taken, have received transfer credit for or are currently taking MATH 151, 154 or 157 may not take EDUC 211 for credit without permission from the instructor.

## COURSE DESCRIPTION

This course explores a variety of mathematical topics in order to increase the mathematical literacy of Liberal Arts students in general, and to increase their capabilities for quantitative reasoning and deductive argumentation in particular. Our focus is on the issues of aesthetics and utility of mathematical experience, emphasizing the human experience in learning and doing mathematics.

Though the course content comes from mathematics, the approach is a pedagogical one, which draws on the knowledge and practices from education rather than applying the lecture/tutorial format most commonly seen in undergraduate mathematics courses. Students will engage in problem solving, investigate conjectures, and develop connections among mathematical topics.

The mathematical content chosen for these courses is flexible and in other settings may be considered as "enrichment". However, in-depth exploration of these topics provides an engaging opportunity to revisit and strengthen more basic concepts that lie at the heart of numeracy. Topics include:

- Fibonacci Numbers and Patterns of Nature
- Pascal's Triangle
- Focus on Integers: Divisibility, casting out nines, prime numbers as building blocks
- Modular (clock) arithmetic
- Beyond integers: rational and irrational
- Exploring the infinite
- Mathematics of chance - topics in probability
- Navigating through data - topics in statistics

Course requirements:

- Active participation
- Weekly homework
- Midterm exam
- Problem solving journal
- Collaborative project
- Final exam
