New Course Proposals

### For information:

MEMORANDUM

Acting under delegated authority at its meeting of June 4, 2020 SCUS approved the following curriculum revisions effective Spring 2021.

### a. Faculty of Environment (SCUS 20-46)

### 1. Department of Geography

- (i) New course proposals:
  - GEOG 118-3, The Water Planet (Fall 2021)
  - GEOG 418 4, Ecohydrology

### b. Faculty of Science (SCUS 20-47)

- 1. <u>Department of Biological Sciences</u>
  - (i) New course proposal: BISC 205-3, Principles of Physiology
- 2. Department of Physics
  - (i) New course proposal: PHYS 391-3, Introduction to Observational Astrophysics

edotvalency Statements under miormation on equivalency, see Equivalency Statements under miormation about specific Course components
I. SEQUENTIAL COURSE [is not hard coded in the student information management system (SIMS).]
Students who have taken (place relevant course(s) in the blank below (ex: STAT 100)) first may not then take this course for further credit.
2. ONE-WAY EQUIVALENCY [is not hard coded in SIMS.]
(Place relevant course(s) in the blank below (ex: STAT 100)) will be accepted in lieu of this course.
3. TWO-WAY EQUIVALENCY [is hard coded and enforced by SIMS.]
Students with credit for (place relevant course(s) in the blank below (ex: STAT 100)) may not take this course for further credit.
Does the partner academic unit agree that this is a two-way equivalency? YES NO  Please also have the partner academic unit submit a course change form to update the course equivalency for their course(s).
4. SPECIAL TOPICS PRECLUSION STATEMENT [is not hard coded in SIMS.]
4. SPECIAL TOPICS PRECLUSION STATEMENT [is not hard coded in Shvis.]
FEES
Are there any proposed student fees associated with this course other than tuition fees?  YES  NO
COURSE - LEVEL EDUCATIONAL GOALS (OPTIONAL)
At the end of this course students will:
-be able to explain and apply Earth-systems concepts in hydrology
-be able to use the systems approach to identify linkages between Earth's surface systems
-be able to think critically about the science behind disruptions to Earth systems.
-be able to use Earth-systems knowledge to inform evidence-based thinking about environmental issues.
-be able to identify pathways towards change-making and demonstrate global citizenship -have a foundational understanding of the diverse relationships between society and space.
-have a roundational understanding of the diverse relationships between society and space.  -be able to define and explain how physical and environmental processes are related to society and space.
-be able to define and explain now physical and environmental processes are related to society and space.

COURSE SUBJECT GEOG NUMBER 418
COURSE TITLE LONG — for Calendar/schedule, no more than 100 characters including spaces and punctuation  Ecohydrology
COURSE TITLE SHORT — for enrollment/transcript, no more than 30 characters including spaces and punctuation  Ecohydrology
CAMPUS where course will be normally taught: ✓ Burnaby Surrey Vancouver Great Northern Way Off campus
COURSE DESCRIPTION — 50 words max. Attach a course outline. Don't include WQB or prerequisites info in this description box.
Interdisciplinary exploration of the interactions between plants and hydrologic processes, with an emphasis on primary literature. Topics covered include evapotranspiration, subsurface water storage in time and space, plant water relations, isotopes in water, biogeographical patterns, modeling, field methods, and the role of ecohydrology in Earth's climate system. Mandatory field trip.
REPEAT FOR CREDIT YES NO Total completions allowed Within a term? YES NO  LIBRARY RESOURCES  NOTE: Senate has approved (S.93-11) that no new course should be approved by Senate until funding has been committed for necessary library materials. Each new course proposal must be accompanied by the email that serves as proof of assessment. For more information, please visit <a href="https://www.lib.sfu.ca/about/overview/collections/course-assessments">www.lib.sfu.ca/about/overview/collections/course-assessments</a> .  RATIONALE FOR INTRODUCTION OF THIS COURSE
This will be a new course offering for a new faculty member, Jesse Hahm, that aligns with his expertise.  Transpiration, or the return of water to the atmosphere by plants, is the largest flux in the terrestrial hydrologic cycle. Understanding how plants source water is critically important in predicting changes to the hydrologic and carbon cycles due to feedbacks between transpiration, productivity, and subsurface water availability. Progress in the field of ecohydrology, which has grown substantially in the past decade, is therefore essential if we are to make accurate and robust assessments about the fate of the Earth system under a shifting climate.
This course will provide students with a foundation in ecohydrology and fill an existing gap in SFU's course offerings within this subject area. It will provide students with a process-level understanding of ecohydrology through instructor-led lectures, reading seminar-style interactions with primary and secondary literature, homework assignments, and field-based measurements of ecohydrologic fluxes and states. Students will be introduced to both foundational texts as well as recent findings in order to understand both historical origins and the current state of the field. Students will gain experience in dissecting scientific papers and communication of scientific ideas (through in class presentations and writing assignments).
Note that Geography only has the resources to offer one GEOG 41x hydrology course per year. Geography currently has GEOG 411 (Advanced Hydrology) in the calendar. An option would have been to just change the name of GEOG 411 from Advanced Hydrology to Ecohydrology. However, one of the reasons that Jesse Hahm was hired was his strength in fieldwork and he wishes to add a field component to his 4th year hydrology course, which will require a fee. Currently, GEOG 411 does not include a fee and

we are unable to add one because of provincial fee regulations. This necessitates a new course number and thus a new course

proposal. Assuming the course is a success, GEOG 411 will be temporarily withdrawn and likely deleted in time.

101, 201, 203 (formerly 103), or 270.

Introduction to Observational Astrophysics
CAMPUS where course will be normally taught:  Burnaby  Surrey  Vancouver  Great Northern Way  Off campus
COURSE DESCRIPTION — 50 words max. Attach a course outline. Don't include WQB or prerequisites info in this description box.
Hands-on introduction to observational astronomy including the astrophysics of stellar clusters, galaxies, nebulae, and the expanding universe; calculation of the conditions for observing target objects; and analysis of photometric and spectroscopic data with Python. Data will be acquired using the Trottier Observatory, weather permitting, otherwise, archival data will be used.
REPEAT FOR CREDIT YES ✓ NO Total completions allowed Within a term? YES NO
LIBRARY RESOURCES  NOTE: Senate has approved (S.93-11) that no new course should be approved by Senate until funding has been committed for necessary library materials. Each new course proposal must be accompanied by the email that serves as proof of assessment. For more information, please visit <a href="www.lib.sfu.ca/about/overview/collections/course-assessments">www.lib.sfu.ca/about/overview/collections/course-assessments</a> .
RATIONALE FOR INTRODUCTION OF THIS COURSE
Why a new course: This course fills a gap in the physics undergraduate curriculum. It is an observational astronomy course that utilizes the Trottier Observatory for credit. Our other astronomy course, Introduction to Astronomy, PHYS 190, already has a lab component that is an excellent experiential component for non-physicists/scientists, but physics majors are not allowed to take it. I want to propose a more advanced/computational 3-credit course for physics undergraduates at the 3rd year level. Physics undergraduates have lamented over the lack of astronomy courses that they are allowed to take. Even though it is designed with physics undergraduates in mind, I believe that general public interest in astronomy as well as the chance to use the Trottier Observatory will be an attractive

# Transferable skills:

The skills students will learn in this course will benefit them long after the course is over since they will be doing all their analysis in the Python programming language. Several departments have recently recognized the strategic importance of Python and have begun using it in several courses. Python is ubiquitous, not only in the astronomical community, but also in the wider world of industry. Astronomical applications of Python will strengthen and prepare our students for countless career opportunities after graduation. The recent transition to Python in the Department of Physics has understandably come with some growing pains, in part because the faculty themselves are also learning the language. However I have been fluent in Python for many years and will have no trouble training students, particularly in astronomical applications.

One additional advantage is that students who have taken this course will become a pool of trained observatory users who are familiar with astrophysics, who could become guides for public astronomy events at SFU such as Starry Nights.

feature of this course that will encourage higher enrollment from other departments.

#### Extendability:

There are many projects that can be done with the Trottier Observatory. In time students will get to decide from a range of photometric and spectroscopic projects they will do. Eventually, when we build a radio telescope, I will replace one of the spectroscopy projects with a project to measure the rotation velocity profile of the Milky Way in order to infer the presence of dark matter.
